Project Background

The Glencoe Municipal Airport will be rehabilitating the pavement area around the hangars as the current pavement is in poor condition. By rehabilitating the pavement area, the airport will improve safety and drainage, and reduce maintenance expenses. They will also be constructing a taxilane and gravel road extension to provide airfield access to future hangars. Additionally, the Airport will be sealing and repairing existing cracks and joints on airfield pavement (runway, taxiway, and apron).

These projects are scheduled to begin on September 8, 2020 with completion anticipated by October 15, 2020.

There will be increased construction activity in the vicinity of the Airport during the project schedule. Access to the Airport terminal building will remain open during construction. The apron will be closed September 8, 2020. The runway will be closed September 8-9, 2020. The taxiway will be closed September 10-11, 2020. Aside from these dates, the airfield will remain open.
