RE: 2023 Pavement Improvement Project Feasibility Report Glencoe, Minnesota SEH No. GLENC 170394 4.00

Honorable Mayor and Members of the City Council City of Glencoe 1107 11th Street E, Suite 107 Glencoe, MN 55336

Dear Mayor and Council Members:

Pursuant to your request, Short Elliott Hendrickson Inc. (SEH<sup>®</sup>) is submitting this engineer's Feasibility Report on the 2023 Pavement Improvement Project.

The project includes improving streets by full-depth reclamation and overlay, parking lane repair (8-foot mill and overlay), full reconstruction, downtown partial reconstruction, 1 inch overlay, and seal coat improvements, along with installation of street drain tile and miscellaneous items required to complete the improvements. This report will include a narrative describing the proposed improvements, estimated costs, estimated assessments, and drawings showing the project work.

Considering several aspects of the items included for construction of this project and having discussed the project in detail with City staff and City officials, it is my opinion from an engineering perspective that the proposed improvement project in necessary, cost effective, and feasible. Thank you for the opportunity to work with you on this important project. I am available to answer any questions you may have.

Sincerely,

Justin Black, PE Project Manager (Lic. MN)

# Feasibility Report

#### 2023 Pavement Improvement Project

Prepared for City of Glencoe, Minnesota

### 1 Introduction

Planning discussions with City staff and city council regarding a Pavement Management Plan began in January of 2019. The goal of the plan is to complete street rehabilitation projects to extend the pavement life the streets 10–20 years and improve the driving surface of the streets. In August of 2022, discussions with City staff started to review streets for a 2023 project. In October, the City started to review options for a larger pavement project in 2023 that would cover the next 5-years of the City's pavement management program.

On October 31, 2022, the general scope and project limits were reviewed with the Glencoe City Council for the fourth year of the Pavement Management Plan, which will be the 2023 Pavement Improvement Project.

The approximate 103 blocks of streets that were chosen for the 2023 Pavement Improvement Project were chosen based on street condition, as well as identifying the streets that the City will have most of the I/I (Infiltration/Inflow) inspections completed on them. All the streets chosen for this project were rated as a 3, 4, or 5 on the City's Street Surface Condition rating scale (1 being the best, 5 being the worst). The streets that are included in this project are shown on Figure 1.

Two open house meetings were held on December 13, 2022, to review the project scope estimated costs and estimated assessments with City staff and residents.

Soil borings were taken as part of this project on the reclaim, partial reconstruction, and full reconstruction streets. This information was used to confirm the feasibility of a rehabilitation project for the deteriorating streets.

### 2 Proposed Improvements

The following street improvements are proposed as part of this project. The locations of each of these improvements are shown in Figures 2 through 15.

### 2.1 McLeod Avenue Reconstruction

#### 2.1.1 Existing Conditions

There are no main line sanitary sewer or water main for this block. Existing services extend in boulevard areas or through back yards across neighboring properties. The sanitary sewer services have failed the I/I inspections. Two of the sanitary sewer services have had numerous backups in the past year. The two houses on the west side of the street have a combined sewer service and share a single sewer connection to the mainline on 11<sup>th</sup> Street. The services lines are partially within city right-of-way a portion of them are on private property.

The exact location of the water services could not be determined in the field. It is assumed they follow a similar alignment of the sanitary sewer services.

Currently the street and curb condition on McLeod Avenue is rated a 2 in a scale of 1 (best) to 5 (worst) and the curb and gutter is in fair condition.

#### 2.1.2 Improvement Options

#### 2.1.2.1 Do Nothing

This option would leave the existing utilities in place. Sanitary backups would continue to occur creating a health and safety issue. This is not a viable option.

#### 2.1.2.2 Line Laterals and Construct Sewer Main in Alley

An option to CIPP line the laterals was reviewed to avoid costly street reconstruction. Lining could be completed on the service laterals on the west side the street, but the combined services on the east side would need to be separated. This could be accomplished by extending a sanitary sewer main line north off of 11<sup>th</sup> Street in the alley east of McLeod Avenue. This improvement would require easements to accommodate the main line and the existing services. The water services would not be addressed. This option results in sewer service lines over 100 feet in length and cleanouts would need to be added to the service laterals between the house and the main line.

#### 2.1.2.3 Construct Main Line Sanitary Sewer and Water Main in Center of Street

This option would include constructing a new sanitary sewer and water main in the street right-ofway. New water and sewer service laterals would be extended to each property. The new water main would connect to existing mains on 11<sup>th</sup> Street and 12<sup>th</sup> Street, providing a looped connection. Homeowners would need to connect their service laterals to these stubs. This option would require reconstruction of the entire street, including curb and gutter and pavement. This option addresses both sanitary sewer and water main; it would also provide sump pump services to the homes. This improvement option would match the typical street and utility reconstruction method from past improvement projects and could be constructed entirely within the right-of-way. This option results in shorter service line lengths; however, it is the most expensive of the options reviewed.

This option results in shorter service lines, the new main lines within the City right-of-way would be easier to access and maintain, and the water main would loop the 11<sup>th</sup> Street and 12<sup>th</sup> Street water systems. This is the recommended option for improvement on McLeod Avenue.

Special assessments will be levied according to the City assessment policy. Estimated assessments are shown in Appendix B.

#### 2.2 Reclamation and Overlay - Trails

The surface condition of the Willow Ridge, 16<sup>th</sup> Street, and Oscar Olson trails have deteriorated to the point where patching or crack filling and seal coating will not provide a long-term solution. The pavement on these trails is more than 25 years old. It is recommended to complete a full depth milling, which is also referred to as bituminous reclamation. Reclamation and overlay work includes pulverizing, mixing, and recycling the existing bituminous surface to create a new homogenous aggregate base layer, and construction of 3 inches of bituminous wear course on

the newly placed aggregate base. Special assessments will not be levied for the trail improvements.

#### 2.3 Reclamation and Overlay - Streets

When the street surface condition has deteriorated to the point where just milling the edge and providing a couple inches of overlay will not provide the long-term solution, it is recommended to complete a full depth milling, which is also referred to as bituminous reclamation. Reclamation and overlay work includes pulverizing, mixing, and recycling the existing bituminous surface to create a new homogenous aggregate base layer. The new aggregate base layer would be subcut 4 inches, tolerance, and compacted. Construction of 2.5 inches of bituminous base course and 1.5 inches of bituminous wear course would be placed on the compacted aggregate base material. Drain tile and sump service lines would be installed inside of the curb and gutter along the edge of the street.

Special assessments will be levied according to the City assessment policy. Estimated assessments are shown in Appendix B.

#### 2.4 Downtown Partial Reconstruction

The project areas of Greeley Avenue and 11<sup>th</sup> Street are the last of the City's downtown areas that have not been improved in the last 5 years. The streets in this area were constructed in the 1990's and besides routine maintenance of seal coat and crack fill have not been improved. The street surface is in need of improvement. The sidewalks are non-compliant to the most current Americans with Disabilities Act (ADA) standards.

It is recommended to complete a full-depth reclamation and overlay on these streets as described above in Section 2.3. These streets were originally designed to carry heavier traffic volumes and vehicle loads. These streets have a 6 inch bituminous surfacing section, thicker than the typical 3–4 inch bituminous surfacing seen in residential areas. The proposed improvements will match the existing 6-inch bituminous section.

All of the curb and gutter, driveways, and sidewalk will be replaced after the reclamation process takes place.

Once paving is completed, new pavement markings will match the existing layout to continue to allow for on-street parking.

Special assessments will be levied according to the city assessment policy. Estimated assessments are shown in Appendix B.

### 2.5 2 inch Parking Lane Mill & Fill

The parking lanes have areas of lost pavement and block cracking. The driving lanes and center of the road are in good condition with only minimal cracking and no areas of pavement loss. The street improvement work includes a 2-inch mill in the parking lanes. The milling would extend about 8 feet from the edge of the curb and gutter on each side of the street. The milled area would be paved with a 2 inch bituminous wear course. Drain tile is not proposed in these areas.

It should be anticipated that underlying cracks will reflect through the overlay within the first year. This is typical for a mill and overlay project and the normal lifespan of 15–20 years for this overlay improvement can still be expected. It is recommended that these cracks be filled the year

following construction and the entire width of street surface seal coated 1–2 years after construction.

Special assessments will be levied according to the City assessment policy. Estimated assessments are shown in Appendix B.

#### 2.6 Seal Coat

Crack filling is a preventative maintenance activity that is typically completed prior to seal coat operations. The larger cracks in the pavement are routered to a width of half or three-quarter inch and then blown clean with compressed air. A rubberized asphalt is applied in the cracks. This material seals the larger cracks, preventing moisture from entering the lower layers of pavement and underlying base material.

Seal coat, and fog seal are also preventive maintenance activities. The seal coat process includes spraying asphalt cement on the surface of an existing pavement followed by the application of granite chips. After the excess chips are swept up and removed a second layer of asphalt cement is applied over the surface of the chips, this is the fog seal.

Seal coating is done to protect the pavement from the deteriorating effects of sun and water. After time bituminous pavements begin to harden or oxidize. Also, as a pavement ages, traffic begins to wear the fine material from an asphalt pavement surface. A seal coat provides a waterproof membrane which not only slows down the oxidation process but also helps the pavement to shed water, preventing water from entering the base material. The granite chips used in seal coating also increase the surface friction on the roadway. The fog seal applied over the seal coat provides an additional layer of waterproof protection, and helps to secure the aggregate chips.

#### 2.7 1 inch Overlay Repair

#### 2.7.1 Scope of Work

The 1 inch overlay is a street surface repair intended to hold the underlaying surface together and help prevent the pavement from breaking loose, especially during snowplow operations. This option simply includes the construction of a 1 inch bituminous wear course over the entire width of the roadway surface. There is no edge milling conducted prior to the overlay, which leads to a raised pavement edge next to the existing curb and gutter. In areas where the existing pavement is in very bad condition, or even completely missing, construction of a 1.5 inch bituminous patch will be done prior to the overlay. The 1 inch overlay also fills in the potholes and other small depressions and will help to direct more of the runoff off the road surface and toward the curb. It is anticipated that cracking in the pavement will occur within the first year. There is also a risk that some isolated areas may experience more severe cracking or pavement breakup due to frost action or as a result of soft subgrade.

#### 2.7.2 Other Options Considered

The alternative to a 1 inch overlay in these areas would be full street and utility reconstruction project or do nothing. At this point in time, the City does not have the financial means for a full reconstruct project. The do nothing option would mean that the streets would continue to fall apart for the next 8 to 10 years, at which point there would be areas of complete pavement loss resulting in segments of gravel surfaced streets.

#### 2.7.3 Special Assessments

The 1 inch overlay and seal coat work is considered street repair and maintenance. This work is not a long-term structural improvement, therefore special assessments will not be levied to the abutting properties in these areas.

#### 2.7.4 Future Street and Utility Reconstruction

The streets identified for the 1 inch overlay repair have been identified as areas that will require reconstruction of all City-owned underground utilities within the next 5 to 10 years. These areas have known sanitary sewer service issues that would not pass the City's I/I policy. Some of these service line issues can only be addressed by replacement of the sanitary sewer mainline. The purpose of the 1 inch overlay is to preserve the road surface until these significant utility improvements can be made. However, knowing that these underground utility issues exist, there is a possibility that repairs to these utilities may be needed prior to the reconstruction project and excavation into the 1-inch overlay may be required.

#### 2.7.4.1 11<sup>th</sup> Street, West of Armstrong Avenue

11<sup>th</sup> Street from Armstrong Avenue west to the City limits was included on the list of streets to study in the feasibility report. Four soil borings were taken on this street to determine the existing street section and if it would be suitable for a reclaim and overlay project. Due to the lack of inplace Class 5 aggregate base, the street would not make a good candidate for a reclaim and overlay improvement. Based on review of the street section with Braun Intertec and conversations with McLeod County public works staff, it is recommended that the street be improved by a mill and concrete overlay.

This segment would be the only are of concrete overlay on the City/s 2023 Pavement Improvement Project. This could result in higher than expected pricing to complete this short segment of concrete overlay work.

The City is currently in conversations with McLeod County about a turnback process which would involve McLeod County taking over this stretch of 11<sup>th</sup> Street. In this case, the County would complete the concrete overlay improvement as part of a larger concrete overlay project in the Glencoe area. It is recommended that the concrete overlay improvements on this segment of the project be completed at a later date in conjunction with a larger concrete overlay project led by McLeod County.

## 2.7.4.2 Welcome Park Trail and Morningside Avenue Trail between 10<sup>th</sup> Street and 11<sup>th</sup> Street

Improvements for these sections of trails are not recommended at this point in time due to the upcoming Hwy 212 and Morningside Avenue roundabout project scheduled to be constructed in 2024. Trail restoration on the Welcome Park trail system will be required for the roundabout project. After the project is complete, the City can then look at what parts of the trail are left and determine what maintenance or reconstruction project may be needed. It is recommended to complete a fog seal on these sections of trails to extend the life until they are studied after the roundabout project.

### 2.8 Drain Tile

Streets that were identified as full-depth reclamation and overlay were also reviewed to determine if drain tile could be added. As part of the project budget, we have included construction costs for perforated polyvinyl chloride (PVC) drain tile on each side of the street on all reclaim and overlay project areas as well as the downtown partial reconstruction project areas. The proposed drain tile lines will be installed along the outer edge of the street, just inside the curb line, and will help to intercept groundwater in the base materials of the street section. The drain tile line will also be helpful to adjacent homeowners, as a sump pump service line will be stubbed into properties to allow for the homeowner to connect their sump pump discharge lines to it.

Fir Circle was reviewed to install drain tile, but due to the lack of a storm sewer system in the area for the drain tile to outlet into, it was decided to not include the drain tile. It will be further explored in the final design stage on whether there could be an outlet for the drain tile to the west, but coordination with nearby landowners will need to take place.

#### 2.9 Storm Sewer

The current storm sewer system on Ives Avenue between 9<sup>th</sup> Street and 10<sup>th</sup> Street is too shallow and causes freezing every year in the spring which doesn't allow the street to drain. After the street surface is removed with the reclamation process, new catch basins will be installed at the mid-block location of existing ones, and a new storm sewer line will be installed south to the storm sewer system on 9<sup>th</sup> Street at an adequate depth to reduce the frequency of issues caused by freezing. The current system discharges into a manhole on 10<sup>th</sup> Street at a depth of 2 feet deep, while the new system will be 4 feet deep.

#### 2.10 Concrete Repairs

Intermittent replacement of concrete curb and gutter will be included throughout the full-depth reclamation project areas. Curb and gutter panels that have settled or heaved and no longer allow continuous uninterrupted drainage will be replaced. In locations where sump pump service lines will be installed, it will also require a section of curb and gutter to be replaced.

The removal and replacement of sidewalk panels and concrete alley entrances will also be required in the Downtown Partial Reconstruction project area. The concrete pedestrian ramps will also be removed and replaced to comply with the most current ADA standards for pedestrian crossings.

### 3 Estimated Costs

The costs noted herein are estimates only. The actual cost of the work would be determined through the public bidding process and a reconciliation of all project related costs. A detailed cost estimate broken down by each street segment has been included in Appendix A. The figures include budget amounts for construction cost, contingency, and project related costs, such as administrative, engineering, fiscal, and legal. Estimated project costs are summarized below.

Full Reconstruction	\$556,000
Reclaim and Overlay	\$2,374,000
Downtown Partial Reconstruction	\$1,442,000
1 inch Overlay	\$1,812,000
Parking Lane Mill & Fill	\$114,000
Trail Reclaim & Overlay	\$174,000
Cemetery Roads	\$169,000
Seal Coat	\$166,000
Total Estimated Project Cost	\$6,807,000

The construction cost estimate will be revised as the project moves forward into the final design phase (Engineer's Estimate).

### 4 Proposed Project Financing

The City of Glencoe's assessment policy was applied to this project for purposed of preparing the feasibility report. This policy would assess 35 percent of the project cost for the following improvements: mill and overlay and reclamation and overlay. Drain tile, sump pump services, curb and gutter, and sidewalk repairs would not be assessed. This policy is based on the cost per front foot method.

Since each street varies some in width, the corresponding construction cost also varies from street to street. In the spirit of simplifying the assessment rate calculation, this report has used the average project cost for each type of improvement in calculating each assessment rate.

Properties abutting the 1 inch overlay and seal coat project areas are proposed to not be assessed for the work on their streets. These project types are considered a maintenance activity rather than an improvement project providing benefit to the property owner.

Estimated assessment rates for each of the improvements are included in Appendix B, along with a summary of the City's assessment policy.

The project will be funded in part through assessments to the benefiting properties, with the balance of the costs paid for by the City's general tax levy.

Neighborhood Assessments	\$856,000
General Tax Levy; Sanitary, Water and Storm Sewer Utility Funds	\$5,951,000
Total Estimated Project Cost	\$6,807,000

### Summary and Recommendations

From the results of the feasibility study and preliminary investigations, it can be concluded that:

- 1. The project is feasible as it related to general engineering principles, practices, and construction procedures as it has been presented in this report.
- 2. The project is necessary to maintain the City's infrastructure and reduce potential maintenance issues in the future.
- 3. The project is cost-effective when all related costs are considered public and private.

We recommend the following:

1. Accept this feasibility report and order a public hearing to be held as soon as possible.

- 2. After holding the public hearing, the city council should consider ordering the Improvement and authorizing the preparation of plans and specifications.
- 3. The cost of the improvements will be recovered through assessments to the benefited properties and City contributions.

### 7 Standard of Care

The conclusions and recommendations contained in this report were arrived at in accordance with generally accepted professional engineering practice at this time and location. Other than this, no warranty is implied or intended.

Sanitary Sewer Service	100%
Watermain Service	100%
Storm Sewer	35% <sup>2</sup>
Sidewalk Replacement	0%
Street: Rehabilitation	35%
Street: Partial Reconstruction	35%
Street: Full Reconstruction	35%
Corner Lot	50% for each side

Notes:

(1) The City share of both Sanitary Sewer and Watermain mains is often funded through monthly utility rates. Corner lots with main line on both sides of the lot are assessed for main line based on the length of the short side of the lot.

(2) All catch basins and leads shall be assessed as part of the street assessment

#### ASSESSMENT RATES 2023 PAVEMENT IMPROVEMENT PROJECT GLENCOE, MINNESOTA SEH NO. GLENC 170394 DECEMBER 19, 2022

Item	Estimated Assessment Rate for Front Footage
Residential Reclaim & Overlay	\$53.00 per L.F.
Commercial Reclaim & Overlay	\$64.00 per L.F.
Downtown Partial Reconstruction	\$150.00 per L.F.
Residential Parking Lane Mill & Fill	\$8.00 per L.F.
Commercial Parking Lane Mill & Fill	\$10.00 per L.F.
McLeod Avenue Full Reconstruction	\$140.00 per L.F.
Water Main	\$23.00 per L.F.
Water Service	\$2,650.00 per Each
Sanitary Sewer Main	\$16.00 per L.F.
Sanitary Sewer Service	\$3,600.00 per Each

# Building a Better World for All of Us®

Sustainable buildings, sound infrastructure, safe transportation systems, clean water, renewable energy and a balanced environment. Building a Better World for All of Us communicates a company-wide commitment to act in the best interests of our clients and the world around us.

We're confident in our ability to balance these requirements.

JOIN OUR SOCIAL COMMUNITIES
